

ANJALI ASHA

Short Bio

Anjali Asha, whose name translates to 'Offering Hope', is a Mexican and Indo-Fijian American singer/songwriter. Her unique cultural background influenced her with a wide spectrum of music growing up. Anjali began writing lyrics as soon as she learned to write and quickly discovered singing to be a passion.

At nine years old she amazed her father by singing him a song she had written. Being a music producer, Anjali convinced him to record the song for a 5th grade class project. A natural at creating melodies with an interest in various music genres continued to help her define a style all her own. Some of her biggest influences include Amy Winehouse, Fergie, Rihanna, Alicia Keys, Etta James, Louis Armstrong and Frank Sinatra.

In June of 2018, Anjali was preparing to release her debut album when a car accident involving a drunk driver brought everything to a halt. Anjali's face was crushed in, separating her cheekbones from her skull, along with a broken nose and jaw. Surgeons estimated a 2-year minimum of recovery time and warned she may never sing again. Anjali defied doctors' orders to rest and she soon became a "miracle" patient. Just two months into her recovery she began to work again. While waiting for upcoming surgeries, she inspired her team to get on board for a whole new project. Seven months later while still in recovery, Anjali proudly announced her new debut album titled, "CHINGONA".

When asked about her album, Anjali said, "As a whole I want "CHINGONA" to make people feel good. It's an upbeat album representing growth and lessons learned. I want listeners to be able to come with me, through the introspection that brought every word, and to read into the deeper meanings behind the lyrics. That not only sums up struggles but influences a new attitude on how to process and push through them into a new chapter. My goal was to capture ambition, positivity, triumph and resilience."

Anjali Asha aka CHINGONA - She's unstoppable!
